

Mirror Margins

Sometimes it is desirable to use different margins for odd and even pages. One example is the printing of a book where on odd pages the left margin should be bigger than the right margin, and on even pages it should be the other way around. For this case, MigraDoc provides the attribute **MirrorMargins** to exchange the left and the right margin.

```
\section
[
  PageSetup
  {
    MirrorMargins = true
    LeftMargin = "3cm"
    RightMargin = "1cm"
  }
]
{
  \paragraph [Format.Shading.Color = LightYellow]
  {...}
  \pagebreak
  \paragraph [Format.Shading.Color = LightYellow]
  {...}
}
```

Loreet ad et luptat. Duis niamconsecte digna facilla reros delit utat augait eratie modions quisciduisi euissed magna feugiam quat alit amet alit, quamcon henibh eum veros nullan eugiat. Ut ipsummod esto exer in hent lortio odolore dolorer iustis am vullam, quating eugueraestie etumsan ute modions.

This page has a left margin of 3 cm and a right margin of 1 cm.

Loreet ad et luptat. Duis niamconsecte digna facilla reros delit utat augait eratie modions quisciduisi euissed magna feugiam quat alit amet alit, quamcon henibh eum veros nullan eugiat. Ut ipsummod esto exer in hent lortio odolore dolorer iustis am vullam, quating eugueraestie etumsan ute modions.

This page has a left margin of 1 cm and a right margin of 3 cm, the exact opposite of the previous page because the **MirrorMargins** attribute is set to true.
