

Hyphenation

MigraDoc 1.1 currently does not support automatic language specific hyphenation. It wraps text only between words. But it is possible to tag long words with one or more conditional hyphens.

Conditional Hyphen

The keyword \- is the conditional hyphen.

```
\paragraph
[Format {LeftIndent = "4.5cm" RightIndent = "4.5cm" Alignment = Justify ...}]
{
  Loreet ad et luptat. Duis niam\con\-secte digna fac\-illa
  reros delit utat augait er\atie modi\ons quisci\duisi
  euis\sed mag\na feu\giam quat alit amet alit, quam\con
  henibh eum veros nul\lan eugiat. Ut ipsum\modesto exer
  in hent lortio odo\lore dolo\rer iustis am vul\lam,
  qua\ting euguer\astie etum\san ute modi\ons.
}
```

Loreet ad et luptat. Duis niamconsecte
digna facilla reros delit utat augait er-
atie modions quisciduisi euissed mag-
na feugiam quat alit amet alit, quam-
con henibh eum veros nullan eugiat.
Ut ipsummodesto exer in hent lortio
odolore dolorer iustis am vullam, qua-
ting eugueraestie etumsan ute modi-
ons.

The same paragraph without conditional hyphens looks like this:

Loreet ad et luptat. Duis niamconsecte
digna facilla reros delit utat augait
eratie modions quisciduisi euissed
magna feugiam quat alit amet alit,
quamcon henibh eum veros nullan
eugiat. Ut ipsummodesto exer in hent
lortio odolore dolorer iustis am vullam,
quating eugueraestie etumsan ute
modions.
